OVERVIEW

We have retired from raising British Native Fell Ponies for the last 25 years. We have researched and imported new bloodlines to expand the gene pool, have had booths at horse expos and other events to help educate others about the breed and have bred about 40 purebred ponies. We still enjoy sharing about our ponies and the breed in general. Our facebook page is up and our website will get a total revamp to list all our foals, and in some situations, show them with their new owners or describe what they are doing. Fell ponies are a sturdy, hardy large draft pony of Northern England. Our breeding stock was handpicked for Fell traits and bloodlines. We had the opportunity to visit many personally either locally or in England before importing. Experience history: work, ride or drive a Fell Pony.
