Healthy Horse App

 The image shows two screenshots of the Healthy Horse app. The left screenshot displays a horse's head with the app's title "Healthy Horse" and logos for Nutrena and the University of Minnesota. The right screenshot shows a "Horse Type" selection screen with a list of breeds: Arabian, Miniature Horse (with a note "Wither height less than 34\"), Pony (with examples "POA, Shetland, Welsh, etc."), Saddle (with examples "Morgan, Mustang, Paso Fino, Saddlebred, TN Walking Horse, etc."), and Stock (with examples "Appaloosa, Appendix, Paint Horse, Quarter Horse, Thoroughbred").	<p>Connect license.umn.edu/technolog... exprlic@umn.edu</p>

OVERVIEW

The Healthy Horse App, developed for iPhones and iPads, allows owners and professionals to estimate the body weight of their horses, which is vital information in assessing feeding practices along with administering medication. The equine's height, body length, neck, and girth circumference is used to calculate the weight. Along with the horse's estimated body weight, ideal body weight and body weight score will be calculated. See our website for additional information. Horse Related Apps
