OVERVIEW

Rescue makes your farm a No-Fly Zone! Find at your local feed, hardware store, or order online. We do it in the most environmentally responsible, effective, and low-maintenance way possible. Our traps and attractants use ingredients found in nature to control pests with a non-toxic mode of action. Fill with water to activate and hang in the shade at least 50ft away from buildings (they really smell and flies love them)! Near the manure and compost piles are great. Start in April before fly season gets here and the jump on the season. See our rave reviews online! Fly|Pest Control
